### **Professional Experience**

I was involved in the development of new luminescent materials, namely phosphors, at the Lebedev Physical Institute of the Academy of Sciences of the USSR, where I defended my PhD thesis in 1982. Subsequently, I joined the Institute of Applied Physics of the Academy of Sciences of Moldova, where I contributed to the growth and characterization of wide-bandgap binary and ternary semiconductor compounds for optoelectronic and photonic applications.

After 1991, I visited, for periods of up to three months, the University of Cagliari, Italy, working with Prof. Alberto Anedda; the University of Parma, Italy, working with Prof. Carlo Razzetti; and the National Technical University of Athens, Greece, working with Prof. Evangelos Anastassakis. During these visits, I studied luminescence and phase transitions in thin films and porous samples of binary and ternary semiconductor compounds.

In 1995/1996 and 1998/1999, I visited the Technical University of Darmstadt in Germany as a Humboldt Research Fellow, where I contributed to the development of new porous materials for optoelectronic and photonic applications. In 2000/2001, I carried out a project devoted to GaN nanostructuring at the University of Michigan in the US, under the sponsorship of the National Research Council. In 2003–2005, I carried out the project “Development of Optical Frequency Up-Converters and Dielectric Mirrors Based on Nanostructured III–V Compounds for Integrated Optoelectronic Circuits” at the University of Rochester, US.

Over the last two decades, I have participated in a series of international projects devoted to optics, optoelectronics, photonics, and biomedical engineering. Among the most important technological developments, I would mention Surface Charge Lithography, a technique enabling the fabrication of ultrathin membranes and recognized with an Award of Excellence at INPEX-2005, the International Invention and New Products Exhibition in Pittsburgh, USA; Hopping Electrodeposition (<https://www.youtube.com/watch?v=B3Czpw2gB4A>); and the invention of Aerogalnite, the first artificial material with dual hydrophilic/hydrophobic properties, which was highlighted by *Physics World* (<https://physicsworld.com/a/hydrophobic-or-hydrophilic-aero-gallium-nitride-is-both/>).

I have presented over 150 scientific reports and lectures at universities and research centers in the United States, Canada, China, Germany, Italy, France, Japan, the Republic of Korea, England, Spain, Sweden, the Netherlands, Belgium, Greece, Portugal, Poland, Hungary, Russia etc. I am a Fellow of the International Science Council, a member of Academia Europaea, a member of the European Academy of Sciences and Arts, a Fellow of SPIE — the International Society for Optics and Photonics, and a member of the editorial boards of several international scientific journals.
